Strap Mounted Clamp for Top Loading Electrofusion Saddles

COMMENTS

The Webbing Strap Mounted Clamp is easy to use and features wrap around straps. The tool applies the correct force onto the branch saddle during the welding process. It's compact, durable and strong by design. These clamps are required for Top Load type Electrofusion Saddles that don't have understraps. Will work on most brands of EF Saddles - check with our team if unsure.

STANDARD COMPOSITION

- To suit mains pipe range 63-500mm
- Adaptor foot ordered separately

FEATURES

- Branch saddle adapter foot for sizes 63/90/125mm offtakes
- Self locking non-slip clamp design
